Computing

To create a story on Scratch.

In computing this week, we would like you to make create your fight scene based on the myth you have written using scratch. You will need to design a background, add a beast and a hero sprite and then add speech.

You do not need to have a login account. However, if you would like to save you game you will need an account so make sure you ask an adults permission and support in setting this up. If you would like your teacher to see your animation, publish it (turn commenting off), and send your username in an email so we can watch it.

Use the link below to go to the tutorial on how to make your character speak in Scratch. Watch the videos if you get stuck.
